

Take Control of Your Bills

We want to help you save. A few small steps could add up to big savings.

Weatherize your home - Sealing air leaks around windows, doors, and vents will help save energy and will make your home more comfortable.

Smart controllers - Smart thermostats, smart appliances, and smart irrigation controllers all use technology to help you save.

Look for EPA labels - When buying appliances, water heaters, electronics, light bulbs, toilets, faucets, shower heads, and more, look for ENERGY STAR® and WaterSense labels. These products are certified by the EPA to use less and can save you money on your utility bills.

Energy Efficiency Adds Curb Appeal

Your main goal in improving the energy efficiency of your home is to save money. But did you know you can reduce energy bills **and** give your home a little extra curb appeal?

- **Windows** - Remove cracked/peeling caulking around exterior windows and apply new caulk. If you have older, single-pane windows, consider replacing them with ENERGY STAR®-models. It will add to the comfort and efficiency of your home.
- **Doors** - Replace unsightly, saggy weatherstripping on exterior doors to create a fresh look and reduce conditioned air from escaping.
- **Outdoor Lighting** - Outdoor lighting is for safety and security, but it can also show off your property at night. LED lighting is not only highly efficient, but the high-quality light will really make your home shine. Add in motion sensors, and you can save even more energy and improve safety.

Safety

Stainless Steel Piping

Corrugated Stainless Steel Tubing (CSST) is a flexible, stainless steel pipe used to supply natural gas and propane to properties. Coated with a yellow or, in some cases, a black exterior plastic coating, CSST is usually routed beneath, through, and alongside floor joists in your basement, inside interior wall cavities, and on top of ceiling joists in attic spaces. While this type of pipe is safe, it is strongly recommended that you determine if the CSST system is properly bonded and grounded.

If you are unsure as to whether your property has CSST or if it has been properly bonded and grounded, contact a licensed electrician to arrange for a professional inspection.
